Our Engineers finally got back to me regarding GCL costs and they confirmed that your price estimates and comparison was typical of single vs. multilayer caps. They volunteered to look into it in detail, but didn't expect to find any dual GCLs that are comparable in price to a single layer VLDPE liner. I directed them not to bother.

So, we won't be submitting any formal comments with regard to cap construction for the ROD. Thanks for your patience.

When do you expect/hope to have the draft ROD available for review? Its no big deal. I'm writing a ROD for another site and I'm trying not to over commit myself up front.

Talk to you soon,
Jim Myers
